PERFORMANCE

The world's most powerful 60-cell solar panel so you can take full advantage of solar energy

More reliability with advanced connections

- Eliminates invasive soldering process
- Reduced thermal stress for long-lasting high performance

Over 20% more power on your roof

- Super efficient heterojunction cells generate over 20% more power than conventional panels
- Ideal to get the most out of limited spaces

Exceptional performance on hot days

- HJT cells mean industry leading efficiency performance when roof temperatures rise

Industry-leading quality

- State of the art production in Singapore
- Lowest warranty claims rate in solar

Guaranteed better durability

- Super-strong frame for better protection against the elements
- Long-lasting high power through better durability

Maximum power for maximum savings

- More reduction on your energy bills
- Leading warranty for a secure investment

Stylish looks

- Seamless appearance on your roof
- Fully black variant: the most elegant feature for your home

Higher light transmission

- Special anti-reflective glass increases light transmission for higher power

REC's iconic Twin Design

- Reduces internal resistance for more power and reliability
- Improved output when shaded

Environmentally-friendly

- Colossal 81% reduced lead content
- Advanced manufacturing minimizes carbon footprint

N-type cell technology = No LID

- No initial drop in installed power
- You get the power you pay for
